

DEFYING GRAVITY

AI Agentic Vibe Coding Workshop

Let AI handle the heavy lifting. You handle the navigation.

3-Hour Hands-On Session | Gemini CLI + Antigravity | Open APIs

All All materials here (including this deck) are at:

ABOUT ME

Aries Youssefian

- Mississauga native (born and raised!), did my undergrad at UOIT/OntarioTechU
- Worked at VMware, Dell, a bunch of software startups that no longer exist, cloud/software consulting since 2019
- AI addict, loves to build stuff, love community, connecting and meeting other like minded folks
- Connect with me on X (@ariesyous) or LinkedIn!

TODAY'S MISSION

0:00 – 0:35

Presentation

What is vibe coding, how to work with AI, tools overview

0:35 – 1:00

Setup & Install

Gemini CLI, Antigravity, and getting your environment ready

1:00 – 2:45

Build Time!

Hands-on hackathon with prompt guides and mentor support

2:45 – 3:00

Show & Tell

Demo your project and celebrate what you built

“ WHAT IS VIBE CODING?

"There's a new kind of coding I call vibe coding, where you fully give in to the vibes, embrace exponentials, and forget that the code even exists."

— Andrej Karpathy, February 2025

Describe, Don't Type

Tell AI what you want in plain language

Accept & Iterate

Let AI generate code, then refine through feedback

Focus on the 'What'

You're the architect; AI is the builder

THE EVOLUTION OF CODING WITH AI

Today's workshop: You'll experience both vibe coding AND agentic engineering.

THE VIBE CODING LOOP

Key Insight: Your source code is the conversation, not the files. The better your prompts, the better your software. When something breaks, don't debug — describe the problem and let AI fix it.

GEMINI CLI

AI in Your Terminal

Free & Open Source

Apache 2.0 license, 60 req/min, 1,000 req/day free

Gemini 3 Models

1M token context window for huge codebases

Built-in Tools

Google Search, file ops, shell commands, web fetch

MCP Support

Extend with custom integrations and plugins

Quick Start

```
# Install globally (Mac/Win/Linux)
```

```
npm install -g @google/gemini-cli
```

```
# Launch in any directory
```

```
gemini
```

```
# Auth: just sign in with Google
```

<https://geminicli.com/>

GOOGLE ANTIGRAVITY

The Agent-First IDE

<https://antigravity.google/>

Editor View

A familiar VS Code-style IDE with AI sidebar. Tab completion, inline commands, and the synchronous workflow you already know.

- ✓ AI-powered code completion
- ✓ Inline natural language commands
- ✓ Agent sidebar for chat
- ✓ All VS Code extensions work

Manager View

Mission control for multiple agents. Dispatch agents to work on different tasks in parallel across workspaces.

- ✓ Multi-agent orchestration
- ✓ Async task execution
- ✓ Artifact-based verification
- ✓ Browser testing built-in

ALSO ON YOUR RADAR

<https://openclaw.ai/>

OpenClaw

The open-source AI agent that runs from your chat apps

- Created by Peter Steinberger in November 2025 — grew from a weekend vibe-coding project
- Runs locally, works via WhatsApp, Telegram, Slack, Discord and more
- 325,000+ GitHub stars — fastest growing open-source project in history
- Permissive-by-default: agents can read files, run commands, even modify their own code
- Great example of what's possible when vibe coding meets agentic AI

Security note: Powerful agents need guardrails. OpenClaw has faced scrutiny for its broad permissions — a good reminder that trust, sandboxing, and careful review matter in agentic systems.

PROMPTING LIKE A PRO

Be Specific

Instead of: *"Make a website"*

Try: *"Build an HTML page that fetches random duck images from the API at random-d.uk and displays them in a CSS grid"*

Set Context First

Instead of: *"Add a search bar"*

Try: *"I'm building a character search page using the Amiibo API. Add a search bar that filters results by name"*

Iterate in Small Steps

Instead of: *"Build me a full app with login, search, DB, and styling"*

Try: *"First, create the basic HTML structure. Next I'll ask you to add the API call. Then we'll style it."*

Feed Errors Back

Instead of: *"It doesn't work"*

Try: *Copy-paste the exact error message and say "I got this error when I ran the script. Fix it."*

CHOOSE YOUR TRACK

TRACK 1

The AI Co-Pilot

New to programming

A

"Zero-G" Fact Generator

Fun facts + duck pics, space-themed CSS

B

Nostalgia Physics Engine

Amiibo search with bouncing images (Matter.js)

C

"Corporate Gravity" Defier

Translate corporate jargon → Space Captain speak

TRACK 2

The Systems Architect

Experienced programmers

A

Mission Briefing Terminal

Space launch data → rich terminal UI

B

Quantum "Bargain Hunter"

Game deal aggregator → styled HTML report

C

Academic Abstractor

arXiv papers → SQLite DB / Markdown summary

D

Art Remix Pipeline

Art Institute data → sci-fi remixed gallery

THE RIGHT MINDSET

DO THIS

- ✓ Think of AI as a fast, eager junior developer
- ✓ Break big tasks into small, testable steps
- ✓ Give context: what tech, what API, what goal
- ✓ Copy-paste errors directly into the prompt
- ✓ Experiment freely — you can always start over

AVOID THIS

- ⚠ Don't treat AI like a search engine
- ⚠ Don't ask for everything at once
- ⚠ Don't assume AI knows your project
- ⚠ Don't paraphrase error messages
- ⚠ Don't be afraid to throw code away

LET'S DEFY GRAVITY

Time to install your tools and start building.

```
python -c "import antigravity"
```
